

Energy Solutions That Make Cents.

One Coat Encapsulation System Rustgrip

Rust Grip® is a one-coat, patented encapsulation system – interior and exterior – that is the one surface protection coating that also acts as a full containment covering. This moisture-cured polyurethane coating has been successful in the harshest environments: chemical fields, oil fields, oil rigs, and in areas that demand resistance to the corrosive effects of day to day exposure.

Rust Grip® can protect and seal surfaces of steel, aluminum, concrete, wood, fiberglass, and other substrates. Rust Grip® will seal out moisture and air with a permanent membrane that stops penetration and deterioration, blocking chemical pollutants that cause corrosion and deterioration.

- Reduces Surface Preparation and Application Costs
- Moisture Membrane
- One-Part Coating
- Patented Encapsulant
- High Surface Tensile Strength
- Long-Term Durability- Chemical and Acid Resistant
- Withstands Exposure to Caustic Environments
- EPA Compliant
- USDA Approved
